Technical Skills

LangChain Suite, Vertex, Vector DBs, RAG, OpenAI, Bedrock, MCP, Python, R, SQL, Typescript, Haskell
ETL & ELT, Data Warehousing, Airflow, PostgreSQL, Snowflake, RDS, BigQuery, FastAPI, Docker, Kubernetes
PowerBI/DAX, Tableau, Looker, Serverless Functions, Jupyter, Git, English, Mandarin, Spanish (Professional)

Professional Experience

IgniteTech — Senior AI Engineer (Finance) *Jun 25–Ongoing*

- Architected and deployed end-to-end contract processing pipeline managing 5000+ files using AWS Step Functions and Bedrock, with automatic model selection and LLM-as-judge evaluation for key date extraction, contract type classification, and automated ingestion into a production RAG system.
- Fine-tuned LoRA adapters for document classification achieving 98%+ accuracy after extensive A/B testing on golden dataset on contract type identification, reducing manual review time by 80%.
- Built scalable AI workflow orchestration with Step Functions, n8n and Python across business operations, improving EBITDA margin by 23% while maintaining rigorous AI evaluation metrics (precision, recall, F1) for production model monitoring.
- Managed revenue operations analytics and integrated acquisition data into centralized BigQuery & Dataform infrastructure, reducing revenue slippage and adding \$25m+ directly to the top line.
- Reported directly to the COO on AI system performance, evaluation metrics, ROI and adoption of production AI initiatives.

PricewaterhouseCoopers — Senior Consultant (Deal Analytics) *Nov 21–Jun 25*

- Developed FastAPI backend systems for financial data processing with built-in validation checks, improving data retrieval speed by 40% and ensuring 99.9% data accuracy for critical business decisions.
- Built interactive financial dashboards with Python backend and scalable data pipelines connected to Snowflake, processing data for 20+ companies for real-time financial reporting and KPI visualization.
- Performed deep, data-driven analyses of company financials and operations across manufacturing, SaaS, and pharmaceuticals for deals of over \$1 billion in aggregate.
- Enhanced the accuracy and depth of analysis for the broader deals team by implementing AI document processing and natural language data query.
- Worked extensively with technical and non-technical stakeholders, translating complex business requirements into technical solutions for M&A due diligence with consistently strong client feedback.

3Fold Resources — Supply Chain Data Analyst *Aug 20–Nov 21*

- Designed and implemented Python-based data processing pipelines to automate procurement workflows, reducing manual work by 3+ hours weekly.
- Developed analytics tools to optimize supplier selection, resulting in 74% cost reduction for key components.

Education

University of Melbourne — Bachelor of Commerce (Actuarial Science) *Jun 19–Dec 21*

Global Scholars Award; H1 Honours

National University of Singapore — Student Exchange Programme (Data Science) *Dec 21–Jun 22*

Honours level Data Science

Projects

Ankicapture.com — AI-powered language learning web app (live production)

Tech: GCP OCR, OpenAI, Modal, Cloudflare Workers, SQL, Memory Store

- Built production web app using GCP OCR, TTS, and language detection with OpenAI to translate foreign language images, generate audio pronunciations, vocabulary and grammar breakdowns, and transliterations; exports to Anki.

ISHONCH — Uzbekistan rental marketplace platform

Tech: Full Stack, Calendar APIs, Payment Integration

- Developed full-stack rental marketplace for Uzbek market with integrated calendar booking system and local payment provider APIs for seamless transaction processing.

Mentorship

Romitan City Government, Uzbekistan — ML/AI Development Mentor *2025*

- Mentored ML/AI developers in application architecture and best practices for government infrastructure constraints
- Enhanced team capabilities in machine learning implementation and scalable system design
- Facilitated knowledge transfer sessions on modern development workflows and deployment strategies
